

A burnt smell came from the distribution box

Overview

Any of the following should be treated as emergency signs: burning smell near an outlet, discoloration or black marks, heat from the outlet or panel, buzzing sounds, or tripped breakers that won't reset. A burnt electrical smell, often described as sulfurous, metallic, or resembling burnt plastic, is a serious warning sign that should prompt immediate action. This distinct odor is usually caused by the insulation around wires overheating or by overheated electronic components, which release. Distribution boxes are the unsung heroes of our electrical systems, quietly managing power until something goes wrong. What is an Electrical Burning Smell?
