

ABS Plastic Low Voltage Distribution Box

Article Overview

ABS plastic low-voltage distribution boxes are durable, fire-resistant enclosures designed for safe electrical distribution in residential, commercial, and industrial applications.

Key Features

Material and Durability: These boxes are made from high-quality ABS plastic, which is fire-resistant, corrosion-free, and lightweight, making installation and relocation easier compared to metal boxes . The doors are often made of PC (polycarbonate) for added strength and transparency options . **Protection and Safety:** Most ABS distribution boxes offer an IP40 protection rating, safeguarding internal components from solid particles and limited water ingress . They are suitable for AC 50-60Hz circuits below 500V, providing protection against overcurrent, overload, and short circuits . **Certifications:** Reliable products comply with IEC60439-3 standards and are certified with CE, ROHS, HF, and IK08, ensuring safety, quality, and international compliance . **Customization and Mounting:** Boxes are available in white or grey, with transparent or opaque windows, and can be customized for specific user requirements . They support DIN rail mounting, allowing flexible installation in various panel systems . **Capacity and Applications:** ABS distribution boxes can range from 2-way to 36-way configurations, complete with earth and neutral bars and neutral link wires . They are widely used in modern buildings, commercial centers, laboratories, factories, and renewable energy systems like solar and wind power . **Advantages:** Compared to metal enclosures, ABS boxes are lightweight, corrosion-resistant, and provide superior insulation. They are also easier to handle and install, making them ideal for both new installations and retrofits
