

Access Device to Switch to Service

Article Overview

You can switch your Android device to service mode for diagnostics or use Switch Access to control it with external switches instead of the touchscreen.

Using Switch Access on Android

Switch Access allows you to interact with your Android device using external switches, a keyboard, or device buttons instead of the touchscreen, which is helpful for accessibility purposes . Steps to set up Switch Access:

- Connect a switch or keyboard via USB or Bluetooth. You can also use built-in buttons on your device for actions.
- Enable the on-screen keyboard if you want to enter text while using Switch Access.
- Choose scanning settings: Auto-scanning highlights items on the screen sequentially until you make a selection. You can adjust scan speed, delay, and number of scans.
- Turn on Switch Access in your device's Accessibility settings.
- Optional: Enable spoken feedback for audio guidance during navigation. This setup allows you to control your device without direct touch input, making it accessible for users with limited mobility.

Entering Service Mode on Android

Service mode (or maintenance/engineering mode) is a hidden menu for diagnostics, testing, and troubleshooting . Steps to access service mode:

- Find the service code for your device and carrier (e.g., Samsung or Google Pixel). These codes are often model-specific and can be found online....
