

Best price for fiber optic splice trays

Article Overview

Fiber optic splice trays come in various types including standard, mass fusion, single fiber, and ribbon trays, with prices typically ranging from \$5 to \$50 per tray depending on capacity and features.

Types of Fiber Optic Splice Trays

1. **Standard Splice Trays** These are versatile trays designed for general fiber management, accommodating multiple splices while maintaining proper fiber bending radius. They are commonly used in enterprise networks and smaller installations .
2. **Mass Fusion Splice Trays** Designed for high-density applications, these trays can handle a large number of fiber splices, often more than 12 fibers. They are ideal for long-haul telecom, cable TV, and data center environments where space is limited .
3. **Single Fiber Splice Trays** These trays manage one splice at a time, providing precise fiber organization. They are preferred in installations with fewer fibers or where careful management is critical, such as in fiber cable tray systems .
4. **Ribbon Splice Trays** Used for ribbon fiber cables, these trays allow multiple fibers to be spliced simultaneously, reducing technician effort and improving traceability. They are suitable for high ribbon cable harnesses and large-scale network deployments .
5. **Heat Shrink and Cold Shrink Splice Trays** These trays are designed for mechanical splicing and use heat or cold shrink sleeves to protect the splices. They are often used in field installations or environments where environmental protection is required .
6. **Field Installable Splice Trays** Compact and easy to install in outdoor or remote locations, these trays may include weatherproofing features to protect splices from environmental factors
