

Cable tray for lighting wires

Article Overview

Wire mesh (basket) cable trays are commonly used for lighting wires due to their lightweight design, flexibility, and ease of installation.

Why Wire Mesh Trays Are Ideal

Wire mesh cable trays, also called basket trays, are constructed from welded steel wires forming an open-grid structure. This design is particularly suited for lightweight cables, such as lighting circuits, low-voltage control wiring, and communication cables, because it provides:

- Flexibility for frequent changes: Cables can be added, removed, or rerouted easily without major modifications to the tray .
- Good ventilation: The open-grid design allows heat dissipation, preventing overheating of bundled lighting wires .
- Lightweight and cost-effective installation: Easier to handle and mount on ceilings or walls compared to heavier ladder or solid-bottom trays .
- Accessibility for maintenance: Technicians can access individual cables quickly for inspection or replacement .

Alternative Options

While wire mesh trays are preferred for lighting wires, other tray types may be used depending on the environment:

- Perforated trays: Flat-bottom trays with ventilation holes can support moderate c...
