

Can corrugated tubing be used for pigtails How should it be connected

Article Overview

Yes, corrugated tubing can be used for pigtail connections, provided it is properly sized and secured to protect the wires.

Suitability of Corrugated Tubing

Corrugated tubing, also known as convoluted or COT tubing, is designed to protect wires and cables from mechanical wear, chemical exposure, moisture, and vibration, making it suitable for pigtail connections in automotive, industrial, and electrical applications. Ensure the tubing's inner diameter is slightly larger than the wire bundle to allow easy insertion and prevent damage.

Connecting and Installing Corrugated Tubing

- **Measure and Cut:** Determine the required length and cut the tubing straight to ensure a proper fit.
- **Insert Wires:** For short or straight runs, insert the wires directly into the tubing. For longer or curved runs, use either the open-end insertion method (slitting the tube for easier bending) or the traction method (using lubricant to reduce friction while pulling wires through).
- **Secure the Tubing:** Use cable ties, specialized clips, or tape to fix the tubing in place and prevent movement.
- **Connecting Multiple Tubes:** If joining multiple sections, use specialized connectors or couplings designed for corrugated tubing to maintain a secure and sealed connection
