

Canada Fireproof Cable Trays and Fire-resistant Cable Trays

Article Overview

Canada offers a range of durable, fireproof cable trays including CSA-approved aluminum, steel, and wire mesh systems suitable for industrial, commercial, and data center applications.

Key Suppliers and Options

Unitray manufactures CSA-approved Class C, D, and E aluminum cable trays and fittings in standard lengths of 3m, 5m, and 6m, with custom lengths available. Their trays are designed for durability, rapid delivery (3-5 days), and compliance with ISO and safety standards, making them suitable for fire-resistant and high-load applications. Superior Tray Systems Inc provides custom-designed, high-quality cable trays that are CSA and UL certified. Their systems accommodate large power and control cables, data, and telecom lines, offering robust, fire-resistant solutions for industrial and commercial installations. Code Electric supplies aluminum and steel ladder trays, wire mesh/basket trays, and instrumentation channels. Their products are widely used in mills, marine terminals, factories, high-rises, and data centers. The trays are designed to prevent cable abrasion, support heavy loads, and meet industrial standards for fire and durability. Wire Mesh Options are increasingly popular for fireproof and ventilated installations. Chalfant wire mesh trays, for example, offer welded steel construction with galvanized or powder-coated finishes, modular 10 ft sections, and high static load ratings. These trays are ideal for industrial, retrofit, and data center applications where airflow, fire resistance, and long-term durability are critical
