

Configuring the local IP address on Huawei core switches

Overview

Start by connecting your Huawei switch to a console port using a serial cable or via SSH if remote access is already enabled. Once in the CLI, enter `system-view` to enter. To meet these requirements, the DHCP server function can be configured on an aggregation-layer user gateway or a core-layer device to assign network parameters such as IP addresses to terminals. The Dynamic Host Configuration Protocol (DHCP) uses the client/server mode to dynamically configure and. Configuring an IP address on a Huawei switch isn't just a technical checkbox—it's the foundation of a reliable, responsive network. Whether you're setting up a new switch or troubleshooting connectivity gaps, getting this step right ensures seamless communication between devices, servers. Before You Start This document will help you log in to and quickly configure Huawei S series switches. For more service configurations, see the Switch Configuration Guide. This document is for switches running V200R003C00 and later. You can run the `display version` command in the user view to check. Today i will discuss how to configure a new huawei switch, so lets go our Huawei Switch Configuration Tutorial part. Procedure: Step 1: Connect the COM port on the PC and the console port on the switch by a cable. Step 2: Power on all devices to perform a self-check. # Set system name /. Check the MAC address table: Use the command "`display mac-address`" to view the MAC address table of the switch. See also How to Ping a Computer?

Specify the following commands to assign a port to VLAN 10 in access mode.
