

Correct connection method for electricity meters in distribution boxes

Article Overview

Electric meters should be connected with the live and neutral wires from the utility supply entering the meter first, then routed through protective devices to the distribution board, with proper grounding for safety.

Overview of Connections

- Utility Supply to Meter Socket
- The incoming live (phase) and neutral wires from the utility transformer or pole are connected to the meter socket terminals.
- Ensure the meter is compatible with the supply type (single-phase or three-phase) and rating.
- Meter to Main Distribution Board
- From the meter, the live wire passes through a main double-pole MCB (for single-phase) or main breaker (for three-phase) before connecting to the busbars in the distribution board.
- The neutral wire is connected to the neutral busbar, which distributes neutral to all sub-circuits.
- The earth wire from the meter or main supply is connected to the earth busbar, which is bonded to the building's grounding electrode system .
- Distribution Board Wiring
- Outgoing circuits are connected to individual single-pole MCBs (for lighting, sockets, or appliances) or double-pole MCBs for higher loads....
