

Dimensions of a 3-phase distribution box

Article Overview

3-phase distribution boxes typically range from compact sizes around 300×200×150 mm to larger industrial enclosures exceeding 600×400×200 mm, depending on current rating and mounting type.

Typical Sizes and Variations

- Compact wall-mounted boxes for commercial or light industrial use often measure approximately 300–400 mm in width, 200–300 mm in height, and 150–200 mm in depth. These are suitable for lower-rated breakers and limited branch circuits (FP01 series) .
- Medium to large industrial boxes can range from 500–600 mm width, 400–500 mm height, and 200–300 mm depth, accommodating higher-rated MCCBs, multiple MCBs, and additional accessories .
- Pole-mounted or outdoor enclosures may have similar width and height but are designed with deeper enclosures to allow for cable entry, terminal blocks, and weatherproofing, often with IP44 or higher ratings .

Factors Affecting Dimensions

- Rated Current: Higher amperage boxes require larger internal space for MCCBs and busbars.
- Number of Circuits: More outgoing circuits increase the width and height to accommodate MCBs.
- Mounting Type: Wall-mounted boxes are generally shallower, while floor-standing or pole-mounted boxes are deeper for cable management.
- Material and Safety Features: Steel or ASA enclosures with insulated busbars and...
