

Distribution Box NEMA4X Specifications and Models

Article Overview

NEMA 4X distribution boxes are corrosion-resistant, weatherproof enclosures designed for harsh indoor and outdoor environments, available in multiple materials and sizes.

Key Specifications

Protection Level: NEMA 4X enclosures provide superior protection against corrosion, windblown dust, rain, sleet, snow, ice, and hose-directed water. They are suitable for both indoor and outdoor use and are independently tested and UL certified for compliance with NEMA standards . **Materials:** Common materials include ABS plastic, polycarbonate, fiberglass, aluminum, steel, and stainless steel. Plastic and fiberglass options offer inherent corrosion resistance, while metal enclosures can be treated with passivation or electro-polishing for enhanced durability . **Sealing and Construction:** NEMA 4X boxes are gasketed and tightly sealed to prevent the intrusion of dust, contaminants, and water. Openings for cables, switches, or displays must be sealed with cable glands or gaskets to maintain the rating . **Environmental Resistance:** These enclosures are designed to withstand factory washdowns, marine environments, chemical exposure, and food processing areas, making them ideal for applications where sanitation and corrosion resistance are critical .

Common Models and Styles

Standard Models: NEMA 4X enclosures are available in junction boxes, console-style...
