

Do modern routers still require fiber optic cables

Overview

A: While not all routers support fiber, many modern models do. Check for terms like "fiber-ready" or "GPON" compatibility. Q: Why is my router not detecting the fiber connection?

A: Ensure all cables are securely connected, the ONT is powered on, and your ISP has activated the. The answer is actually no—fiber optic equipment differs significantly from cable setups. Instead of a traditional modem, fiber internet requires an Optical Network Terminal (ONT) that converts light signals into electrical signals your devices can understand. Additionally, you'll need a compatible. Once the ONT and router are connected via Ethernet cable, the router creates a WiFi signal to connect your devices, or you can use additional Ethernet cables to connect your devices to your router. For the best performance, you'll want at least Cat5e or Cat6 Ethernet cables. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled). Do you need a modem for fiber optic internet?

A fiber optic internet doesn't need a modem, but it requires another setup known as the Optical Network Terminal (ONT).
