

Double-row ultra-narrow distribution box

Article Overview

A double-row ultra-narrow distribution box is a compact, high-capacity panel designed for efficient power or air distribution in constrained spaces.

Overview

Double-row distribution boxes feature two rows of circuit breakers, fuses, or connectors, allowing for organized and scalable distribution of electricity or air. The ultra-narrow design makes them ideal for tight installation spaces, such as underfloor areas, attics, ceilings, or compact industrial setups. They are widely used in commercial, industrial, and residential applications, providing reliable and efficient distribution while saving space.

Key Features

- **Material and Durability:** Available in galvanized steel, stainless steel, or flame-retardant plastics, ensuring corrosion resistance, mechanical strength, and fire safety.
- **Port and Connector Options:** Typically equipped with Ø75 mm ports for ventilation boxes or modular connectors for electrical boxes, with main ports ranging from Ø160 mm to Ø200 mm.
- **Protection Ratings:** Many models offer IP40 to IP67 protection, safeguarding against dust, moisture, and mechanical stress.
- **Modularity:** Some electrical distribution boxes, like Panasonic modular systems, allow horizontal and vertical expansion, enabling customization for specific project needs.
