

Electricity meter distribution box 800800

Article Overview

The 800800 electricity meter distribution box typically refers to a high-capacity, 800A-rated distribution unit suitable for residential or commercial installations.

Overview and Specifications

The 800800 distribution box is designed for multi-unit metering and power distribution, often used in residential complexes or commercial buildings. A representative example is the Square D EZ Meter-Pak, which supports 800A with a copper busbar rated for 800A, and accommodates 3-phase, 4-wire configurations with incoming 208Y/120VAC or 240/120VAC delta service . These units can handle short-circuit currents up to 100kA, depending on upstream protection, and are compliant with UL standards for safety .

Materials and Enclosure

Distribution boxes of this type are available in painted steel (Type 3R) or GRP (Glass Reinforced Plastic) enclosures, offering durability and weather resistance . GRP enclosures are often surface-mounted and can be customized in various colors (e.g., Light Gray RAL 7035 or British Racing Green) to suit site-specific requirements . They provide protection against water, dust, and UV exposure, making them suitable for outdoor installations.

Features

- Main devices: Main circuit breakers, fusible switches, or main lug terminal boxes
