

Explosion-proof mobile distribution box

Article Overview

Mobile explosion-proof distribution boxes are portable electrical enclosures designed for hazardous areas, certified under ATEX and IECEx standards, and built to safely distribute power in extreme industrial environments.

Key Features

Explosion-proof design: These distribution boxes are engineered to prevent ignition of flammable gases, vapors, or dust in hazardous zones, making them suitable for Zone 1, 2, 21, and 22 applications . **Mobility:** Many models are portable or movable, equipped with wheels or handles for easy relocation on industrial sites, allowing flexible deployment in construction, petrochemical, or offshore operations . **Materials:** Enclosures are typically made from stainless steel (AISI 304L or 316L) or glass-reinforced polyester (GRP), providing corrosion resistance and durability in harsh climates . **Internal configuration:** These boxes can house MCBs, motor starters, switches, push buttons, voltmeters, ammeters, and other control devices. Some models allow front-panel installation for space-saving and easy access . **Certifications:** Most mobile explosion-proof distribution boxes carry ATEX (EU) and IECEx (international) certifications, ensuring compliance with global safety standards . **Customization:** Many suppliers offer fully configurable solutions, including the number of circuits, socket types (16A, 32A), and internal layout to meet specific project requirements .

Applications
