

# Fiber Optic KVM Matrix Engineering

## Overview

A Fiber Distribution KVM Matrix System is a specialized KVM (Keyboard, Video, Mouse) matrix system that uses fiber-optic technology to distribute signals across long distances, offering centralized control over multiple computers and servers in large or complex environments. AVCIT PHINX is a Fiber KVM Matrix System with simple and smart user experience without wasting any fiber ports. Thanks to dynamic ports of KVM Matrix switch, any PHINX ports can be automatically detected as inputs for the computers, or outputs for the user ports, as soon as the KVM over Fiber. Thinklogical manufactures mid-to-large scale fiber-optic KVM matrix switches that are IA-accredited to manage multiple classifications of information through a single switch, simplifying authorized information access and improving operations center workflows. Matrox KVM extenders can extend signals—such as keyboard, mouse, audio, video, RS232, and USB—over fiber, copper, LAN, or private WAN. Single Mode & Multi Mode (Three Fiber) Fiber KVM Extenders. Dual Monitor. Traditional copper-based KVM architectures have reached physical and performance limitations, prompting a shift towards fiber-optic infrastructures that offer secure, electromagnetic interference-resistant pathways for signal transmission. This evolution is redefining the rules of engagement for.
