

Fiber optic cable identification tape manufacturer s label

Article Overview

Fiber optic cable identification tapes and labels are specialized markers designed for long-term durability, clear identification, and compliance with industry standards, available in customizable formats from multiple manufacturers.

Types of Fiber Optic Cable Labels

1. Self-Laminating Wrap Labels: These labels wrap around the cable and seal themselves, protecting the printed information from abrasion, moisture, and UV exposure, making them ideal for both indoor and outdoor applications . 2. Tie-On or Flag-Style Tags: These are attached to the cable using a tie or clip, often used for patch leads or trunk cables in high-density environments . 3. Rigid Identification Markers: Durable plastic tags that can be engraved or printed, suitable for long-term installations and harsh conditions . 4. Thermal-Printed Labels: High-resolution thermal transfer labels provide smudge-resistant, fade-resistant markings that can last over 10 years, suitable for professional installations .

Key Features

- **Durability:** UV-stabilized plastics and industrial-grade materials ensure longevity even in outdoor or high-traffic areas .
- **Customizable Printing:** Labels can include alphanumeric codes, color coding, company branding, or specific cable information such as fiber count, type (single-mode or multimode), and installation date
