

Fiber optic card storage array cannot be recognized

Overview

Verify that the fiber switch zoning configuration permits the ESXi host to see the storage array. Consult your switch vendor if you require assistance. Each step provides instructions or a link to a document, in order to eliminate possible causes and take. After installing ESXi on a host storage devices on fibre channel HBA are not visible even after performing a storage rescan. In the vCenter Server Under Host and Clusters view >> Configure >> Storage adapters, the vmhba adapters shows no devices attached. Note: One should gather a vm-support bundle prior to any changes and have a good understanding. Step 2 -- Find out which drive letters are currently in use on the system. Step 2a - If the Storage Pool you wish to create the CSV in is present, skip to Step 3. Step 4 - Add Cluster Shared Volume. Most Fibre Channel related issues are due to hardware defect such as: First step is to try to reseal cable and/or sfp for hardware related issues.
