

Fiber optic router not displaying normally

Article Overview

A fiber optic router not displaying normally is often caused by power issues, loose or damaged cables, dirty connectors, or ONT/router malfunctions, and can usually be resolved through systematic inspection and reset procedures.

Step 1: Check Power and Device Status

Ensure your Optical Network Terminal (ONT) and router are properly powered. Observe the LED indicators on the ONT: a green light usually indicates normal operation, while red, blinking, or “LOS” (Loss of Signal) lights signal issues. If the ONT shows a problem, try power cycling the device by unplugging it for 30 seconds and reconnecting it .

Step 2: Inspect Fiber Cables and Connectors

Examine all fiber optic cables for visible damage, sharp bends, kinks, or crushing. Maintain the minimum bend radius (typically 10 times the cable diameter) to prevent signal loss. Check connectors for dust, oil, or scratches using a fiber inspection microscope. Clean connectors with the wet/dry method or a one-click cleaner until the endface passes inspection .

Step 3: Test Signal and Hardware

If cables and connectors appear intact, measure signal strength using an optical power meter or OTDR. Values outside the normal range (approximately -15dBm to -30dBm) may indicate signal loss. Swap suspect transceivers or router modules wit...
