

Fiber optic splicing 20

Overview

The FDX 20 series splice boxes ensure continuously reliable data transmission in real time. Fiber optic strands are ultra-lightweight and about as thin as human hair, and yet, they have more than eight times the pulling tension of a copper wire. It combines Signal fire's latest research and development of a delayed return electric one-step cleaver with fiber fusion splicing. By adopting advanced image recognition technology, AI10 can automatically recognize the type of fiber and quickly achieve precise alignment of the fiber end face, greatly improving the fusion efficiency and success rate. Another method of connecting optical fibers is termination or connectorization, which consists of processing the end of a fiber optic bundle so that it can be connected to other fibers or devices through fiber optic.
