

Fire-resistant cable trays are available in Singapore

Article Overview

Fire-resistant cable trays in Singapore are available in FRP/GRP and metal variants, designed to meet stringent fire safety standards while providing durability, corrosion resistance, and ease of installation.

Types and Materials

FRP/GRP Cable Trays: Made from fiberglass reinforced with fire-retardant resins, these trays are lightweight, corrosion-resistant, and non-conductive. They are suitable for harsh environments such as chemical plants, refineries, and marine applications. FRP trays comply with ASTM E-84 and NEMA FG-1 standards, offering flame retardancy, UV resistance, and low thermal conductivity, which helps maintain optimal cable operating temperatures . **Metal Cable Trays:** Steel, aluminium, or stainless steel trays are also available with fire-resistant coatings or designs. These trays provide high mechanical strength and can support heavy cable loads. Some metal trays, like the Legrand P31 range, offer perforated or solid sheet designs with flexible configurations, bends, and mounting options, ensuring reliable and safe installations .

Fire Protection Features

Fire-resistant cable trays are designed to prevent flame propagation and maintain cable functionality during a fire. Solutions such as FLAMMOTECT-A coatings and DG-CR 0.7 fire protection tapes can be applied to both FRP and metal trays to enhance...
