

Fixing the outgoing terminals of the distribution box

Overview

Connect both live and neutral outgoing cable to RCBO outgoing terminals. This unit must be installed by a qualified electrician (skilled person) in compliance with current requirements for Electrical Installations (IET Wiring regulations BS7671). Ensure that all power supplying this equipment is Isolated before working on or inside the unit. Make sure all devices. Switch ON the outgoing feeders step by step so as to feed the connected load. Check total load on the panel by measuring the current in incoming feeder to. Tightening the wiring terminals of the distribution box is an important operation to ensure reliable and safe electrical connections. In the sign current and the current likely to flow in abnormal re need to assess the current demand. Check the electrical load and ensure that the sensors do not exceed the 10 Amp maximum.
