

# Flat-head fiber optic patch cord

## Article Overview

A fiber optic patch cord with a flat head is a pre-terminated cable designed to connect fiber optic devices using flat-faced connectors, ensuring low-loss, high-performance signal transmission.

### Overview

A fiber optic patch cord, also called a fiber jumper, is a short cable with connectors on both ends used to link devices in a fiber optic network. The flat head refers to the physical design of the connector end, typically with a flat or physical contact (PC) polish, which ensures minimal signal reflection and low insertion loss during transmission .

### Connector Types

Flat head patch cords are available in various connector types to suit different applications:

- LC (Lucent Connector): Small form factor, commonly used in high-density racks.
- SC (Subscriber Connector): Larger, push-pull design, widely used in telecom and data centers.
- ST (Straight Tip): Bayonet-style connector, often used in legacy networks.
- MTP/MPO: Multi-fiber connectors for high-speed, high-density applications .
