

Foot clips for climbing fiber optic cables

Article Overview

Foot clips, or cable clips, are specialized hardware used to secure and organize fiber optic cables along surfaces, available in adhesive, clip-on, and screw-mounted types for various cable diameters.

Types of Fiber Optic Cable Clips

1. **Clip-On and Screw-Mounted Clips** These clips are designed to hold fiber optic cables securely in place, preventing movement and stress. They can be mounted using screws or nails and are suitable for industrial and telecommunication installations. Some clips, like the Right-Angle Clip with Powder Actuated Nail, support ceiling wires and jack chains and are made from durable steel for long-term use (Fiber Savvy) . 2. **Self-Adhesive Clips** Self-adhesive clips are easy to install on smooth surfaces such as glass, metal, or plastic. They are ideal for smaller-diameter cables and can hold multiple cables in a single clip. For example, Elfcam self-adhesive clips accommodate cables from 0.5 mm to 6 mm in diameter and can be separated to fit thicker cables or multiple lines . 3. **P-Clips and Loop Clamps** P-Clips and loop clamps are used to secure cable bundles or cylindrical components to surfaces. They are often used in laboratory or optical table setups, allowing attachment via screws and providing flexibility for larger cable diameters up to 19 mm (0.75") . 4. **Modular Fibre Clips** These clips can hold multiple fiber optic cables in separate slots, with sizes ranging from 2.9 mm to 6 mm. They are suitable for telecommunication cabinets, data centers, and industrial applications. Installation can be done via clip-on, adhesive, or screw mounting, offering versatility for different environments .
