

Guatemalan fiber optic cable models

Article Overview

In Guatemala, standard fiber optic cables include single-mode and multi-mode types, designed for both structured cabling and outside plant installations, following international standards like ANSI/TIA/EIA and NEC.

Types of Fiber Optic Cables

Single-Mode Fiber (SMF):

- Used for long-distance telecommunications and high-speed data networks.
- Typically has a core diameter of 8-10 μm .
- Supports higher bandwidth and lower attenuation, ideal for backbone networks and intercity connections . Multi-Mode Fiber (MMF):

- Used for shorter distances, such as within buildings or campuses.
- Core diameters commonly 50 μm or 62.5 μm .
- Supports high-speed data transmission over shorter runs, often used in LANs and data centers . Outdoor/Outside Plant Cables:

- Designed for direct burial or aerial installation.
- Often armored or self-supporting to withstand environmental conditions.
- Includes IP-rated mini boxes and protective sheaths for splicing and distribution .

Indoor/Structured Cabling Cables:

- Used in offices, data centers, and commercial buildings.
- Includes simplex or duplex cables compatible with SC, LC, or ST connectors.
- Designed for easy routing through conduits and cable trays, often with flame-retardant jackets
