

How is fiber optic cable connected to the router

Article Overview

Fiber optic cables connect to a router indirectly via an Optical Network Terminal (ONT), which converts light signals into electrical signals that the router can use.

Step 1: Understand the Components

To connect fiber internet to your router, you need:

- Fiber optic cable: Typically a thin, yellow cable with SC/APC or SC/UPC connectors.
- Optical Network Terminal (ONT): Provided by your ISP, it converts the fiber's light signals into electrical signals.
- Router: Must have a WAN or Ethernet port compatible with the ONT.
- Ethernet cable: Usually Cat6a or higher to maintain high-speed performance .

Step 2: Connect the Fiber to the ONT

- Locate the fiber wall outlet where the ISP's fiber line enters your home.
- Remove protective caps from both the fiber cable and the ONT port.
- Align the fiber connector with the ONT's optical port and insert it until it clicks securely. Handle the fiber by its plastic housing to avoid damage .
- Power on the ONT and wait for the status lights to stabilize (usually 2-5 minutes).

Step 3: Link the ONT to the Router

- Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the router's WAN port....
