

How much do construction site electrical distribution boxes and switch boxes cost

Article Overview

Electrical distribution boxes and switch boxes typically cost between \$5 and \$1,900 per unit, depending on type, size, material, and installation complexity.

Distribution Box Costs

The cost of distribution boxes varies widely based on specifications such as voltage rating, amperage capacity, number of circuits, material, and integrated safety features. Standard residential units generally range from \$150 to \$1,500, including installation, while commercial or industrial boxes with higher durability and advanced control systems can reach \$1,900 or more. Outdoor or weather-resistant enclosures usually carry a premium of 30-60% over standard indoor boxes due to additional material and protective features. Key factors influencing distribution box costs include:

- Amperage and number of circuits: Higher capacity panels cost more.
- Material: Plastic boxes are cheaper, while metal or tamper-resistant boxes are more expensive.
- Installation complexity: Stud spacing, conduit routing, and labor rates affect total cost.
- Additional features: Smart monitoring, remote control, or integration with building management systems increase upfront costs but may reduce long-term energy and maintenance expenses
