

How much does a 23-port fiber optic patch panel cost

Article Overview

A 23-port fiber optic patch panel typically costs between \$80 and \$250, depending on type, connectors, and features.

Price Range and Factors

The cost of a 23-port fiber optic patch panel varies based on several factors:

- **Connector Type:** Panels with LC, SC, or ST connectors differ in price. LC and SC are more common and generally slightly more expensive than ST.
- **Singlemode vs Multimode:** Singlemode panels are usually more expensive than multimode due to higher precision requirements.
- **Rack-Mount vs Wall-Mount:** Rack-mount panels tend to cost more than compact wall-mount or DIN rail models.
- **Brand and Quality:** Established brands like FiberTek, Graybar, and RLH Industries may charge more for reliability and warranty support. For example, mini wall-mount or DIN rail fiber patch panels with 24 ports (closest standard to 23 ports) are often priced around \$80-\$150, while rack-mount sliding panels with similar port counts can range from \$150-\$250 depending on pre-loaded adapters and splicing features .

Additional Considerations

- **Pre-loaded vs Empty Panels:** Panels pre-loaded with adapters or splice trays cost more than empty panels....
