

How much does an ASEAN micro-module cost

Article Overview

The estimated cost of an ASEAN small modular reactor (SMR) micro-module is likely over \$10,000 per kilowatt, though no unit has yet been fully licensed or built in the region.

Cost Estimates

Current analyses indicate that SMR projects tracked globally, including potential ASEAN deployments, have costs exceeding \$10,000 per kilowatt of installed capacity . This figure reflects early-stage development, regulatory compliance, and the high cost of modular nuclear technology. For a typical micro-module of 50-300 MW, this translates to hundreds of millions to over a billion USD per unit, depending on size, design, and local infrastructure.

Factors Affecting Costs

- **Licensing and Regulatory Compliance:** ASEAN countries, like Singapore, have yet to fully license SMRs, which adds uncertainty and potential cost escalation .
- **Construction and Supply Chain:** SMRs require specialized components, often imported, and modular assembly can reduce but not eliminate high upfront capital costs .
- **Site Preparation and Infrastructure:** Even small reactors need secure sites, grid connections, and waste management solutions, which can significantly increase total project costs .
- **Economies of Scale:** Costs may decrease with multiple units or regional collaborat...
