

How much does it cost to assemble a three-level distribution box

Article Overview

A three-level distribution box assembly typically costs between \$2,500 and \$8,000, depending on materials, internal components, and installation complexity.

Price Breakdown

Material and Enclosure: The cost varies widely based on the enclosure material. Basic ABS plastic units are inexpensive, while powder-coated steel or high-grade stainless steel enclosures can significantly increase the price. Outdoor-rated or weather-resistant boxes carry a premium due to durability requirements.

Internal Components: The number and quality of circuit breakers, busbars, surge protectors, and other protective devices directly affect cost. A fully equipped three-level assembly with high-quality components can cost several thousand dollars more than an empty shell.

Labor and Installation: Professional installation is a major cost factor. For complex industrial setups, labor can range from \$1,500 to \$5,000, depending on the number of circuits, wiring complexity, and whether retrofitting is required.

Installation in older buildings or areas requiring conduit rerouting may add 15–20% to the total cost.

Smart Features and Customization: Modern distribution boxes with smart monitoring, remote control, or integration with building management systems increase upfront costs but can provide long-term savings through energy efficiency and reduced maintenance. Custom mounting, labeling, or ventilation requirements also influence pricing.
