

How to configure a router with fiber optic fixed IP address

Article Overview

To connect a router to fiber optic internet using a fixed IP, you must link the router to the ONT, access the router's WAN settings, and manually enter the static IP, subnet mask, gateway, and DNS information provided by your ISP.

Step 1: Connect the Router to the ONT

- Ensure your Optical Network Terminal (ONT) is installed and active. The ONT converts the fiber optic signal into an Ethernet connection for your router .
- Use a Gigabit Ethernet cable to connect the ONT's LAN port to your router's WAN port. Only routers with a compatible WAN port can handle fiber speeds .

Step 2: Access the Router's Admin Panel

- Open a web browser on a device connected to the router.
- Enter the router's default IP address (commonly 192.168.1.1 or 192.168.0.1) to access the admin interface .
- Log in using the router's admin credentials.

Step 3: Configure WAN Settings for a Fixed IP

- Navigate to the WAN or Internet settings section.
- Select Static IP or Manual IP as the connection type.
- Enter the following information provided by your ISP:...
