

How to connect a fiber optic router for upgrade

Article Overview

To connect a fiber optic router, use an Optical Network Terminal (ONT) to convert the fiber signal, link it to your router via Ethernet, and configure the router for optimal performance.

Step 1: Gather Required Equipment

- Optical Network Terminal (ONT): Provided by your ISP, converts fiber light signals into electrical data your router can use .
- Fiber optic cable: Usually single-mode with SC/APC or SC/UPC connectors .
- Ethernet cable (Cat6 or higher): Connects the ONT to your router .
- Fiber-ready router: Ensure it supports gigabit or multi-gigabit speeds and modern standards like Wi-Fi 6 or Wi-Fi 6e .

Step 2: Connect the Fiber Optic Cable

- Locate the fiber wall outlet where your ISP's fiber line enters your home .
- Plug one end of the fiber optic cable into the wall outlet and the other into the ONT's designated port .
- Power on the ONT and wait 2-5 minutes for the status lights to stabilize .

Step 3: Connect the Router

- Use an Ethernet cable to connect the ONT's Ethernet/LAN port to the WAN port on your router .
- Power on the router and wait for the indicator lights to confirm a successful connection .
