

How to connect optical modules at both ends to fiber optic cable

Article Overview

To connect optical modules at both ends of a fiber optic cable, use compatible SFP modules, clean and align the fiber connectors, and secure them via adapters or splicing for reliable signal transmission.

Step 1: Choose the Right Optical Modules and Cables

Select SFP (Small Form-factor Pluggable) or QSFP modules compatible with your network devices, such as switches or routers. Ensure the modules match the data rate (1G, 10G, 25G, etc.) and fiber type (single-mode or multi-mode) of your cable . Use fiber optic cables with connectors that match the module ports, commonly LC, SC, ST, or FC .

Step 2: Prepare the Fiber Optic Cable

- Inspect and clean the fiber ends using lint-free wipes and fiber cleaning solution to remove dust or debris .
- Check for damage such as kinks or cracks, as these can cause signal loss .
- Maintain proper bend radius and avoid excessive pulling to prevent physical damage .

Step 3: Connect Using Adapters or Direct Insertion

- Fiber Optic Adapters/Couplers: Insert the fiber connectors into a compatible adapt...
