

How to connect the network rack lights

Article Overview

Network rack lights are typically installed using LED strips or panels mounted inside the rack and powered via the rack's AC or DC supply, ensuring proper placement, secure mounting, and safe wiring.

Choosing the Right Rack Lights

Network rack lighting can be functional or aesthetic. Functional lighting helps you see inside enclosed racks for maintenance, cable management, and equipment installation, while RGB or LED strips can add visual appeal . Common options include:

- 1U LED panel lights: Compact, mountable in standard 19-inch racks.
- LED strips or bars: Flexible, can be mounted along vertical rails or top of the rack.
- Integrated luminaires: Designed for data centers, often with smart controls like PIR sensors or DALI systems .

Mounting the Lights

- Plan placement: Position lights to illuminate all equipment, avoiding shadows. Top-mounted or vertical rail-mounted lights are most effective .
- Secure mounting: Use screws, brackets, or adhesive backing depending on the light type. Ensure the lights are stable and won't interfere with airflow or equipment access.
- Consider heat and vibration: Choose lights rated for elevated temperatures and vibrations common in server racks .
