

How to connect to the internet using fiber optic cable and a router

Article Overview

To connect to the internet via fiber optic cable, you need an Optical Network Terminal (ONT) to convert the fiber signal into an Ethernet signal, which is then linked to your router.

Step 1: Gather Necessary Equipment

- Optical Network Terminal (ONT): Provided by your ISP, it converts light signals from the fiber into electrical signals your router can use .
- Fiber optic cable: Usually a thin yellow cable with SC/APC or SC/UPC connectors .
- Router: Ensure it supports fiber input or has a WAN port for Ethernet connection .
- Ethernet cable: To connect the ONT to your router .

Step 2: Install the ONT

- Locate the fiber optic wall outlet where the ISP's fiber line enters your home .
- Connect the fiber optic cable from the wall outlet to the ONT's optical port . Handle the fiber connector carefully to avoid dirt or damage .
- Power on the ONT and wait for the status lights to stabilize, usually 2-5 minutes .

Step 3: Connect the ONT to Your Router

- Use an Ethernet cable to connect the ONT's Ethernet/LAN port to your router's WAN port .
- Power on the router and wait for the indicator lights to confirm a successful connection
