

How to dissolve a disc in an optical distribution box

Article Overview

You can safely remove a stuck disc from an optical distribution box using manual ejection, emergency pinhole methods, or by carefully disassembling the drive.

Manual Ejection Using a Pinhole

Most optical drives have a small emergency eject hole on the front panel. Straighten a paperclip or use a pin, insert it into the hole, and gently push until the tray or disc pops out slightly. You can then pull the disc out by hand. This method works for both internal and external tray-load drives and is often the safest first step if the drive is powered but unresponsive .

Ejecting via Software or BIOS

If the drive is connected to a computer, you can try:

- Operating System Eject: Right-click the drive icon in File Explorer (Windows) and select "Eject" .
- BIOS Eject: Restart the computer, enter BIOS (usually F2 or Del), and press the drive's eject button. If successful, the disc can be removed before booting into the OS .
