

How to install cable tray supports at corners

Article Overview

Cable tray corners can be installed by carefully cutting, bending, and securing the tray while maintaining proper bend radius and grounding.

Preparation and Planning

Before installing corners, ensure you have the correct personal protective equipment (PPE) such as gloves, safety glasses, and a hard hat. Review your project drawings to identify corner locations and check for potential clashes with HVAC, plumbing, or other services. Mark the tray route and support points using a chalk line or laser level, maintaining proper spacing between supports, typically 1.5 to 2 meters.

Tools and Materials

You will need:

- Power drill and wrench set
- Hacksaw or angle grinder for cutting trays
- File for deburring edges
- Cable tray couplers or splice plates
- Mounting brackets, threaded rods, and anchor bolts
- Grounding straps for electrical safety
