

# How to set up a network using two fiber optic cables with a router

## Article Overview

To set up a router with two fiber optic cables, you need an ONT for signal conversion, a fiber-capable switch, and proper IP configuration to manage multiple routers.

### Step 1: Understand the Hardware Requirements

- Optical Network Terminal (ONT): Converts the incoming fiber optic signals into Ethernet that your routers can use .
- Fiber-Ready Routers: Ensure both routers support fiber input via SFP/SFP+ ports or can accept Ethernet from the ONT .
- Fiber Switch (Optional): If you want to split a single fiber connection to multiple routers, a fast, small switch can distribute the signal .
- Cables: Use appropriate fiber optic cables (single-mode or multi-mode) and Ethernet cables for connections.

### Step 2: Connect the Fiber Cables

- Single Fiber to Multiple Routers:
  - Connect the fiber cable from the wall outlet to the ONT.
  - Use Ethernet from the ONT to a fiber-capable switch.
  - Connect each router to the switch via Ethernet ports.
- Separate Fiber Lines:
  - Each fiber cable goes to its own ONT.
  - Connect each ONT directly to its respective router....
