

How to strip the insulation inside a cable tray

Article Overview

Use the right tools and techniques to safely remove insulation from cables without damaging the conductors.

Safety First

Always ensure the cable is disconnected from any power source before starting. Wear protective gloves and eye protection to prevent injuries from sharp tools or flying insulation fragments .

Tools You Can Use

- Manual wire strippers: Pliers with notches for different wire gauges, ideal for precise insulation removal on single or multi-core wires .
- Automatic wire strippers: Self-adjusting tools that score and remove insulation in one motion, reducing the risk of conductor damage .
- Utility knife or cable knife: Useful for scoring the outer jacket of thick cables, especially multi-core power cables .
- Multifunctional pliers: Combine cutting, stripping, and crimping functions, convenient for home or workshop use .

Step-by-Step Procedure

- Identify the cable type and gauge: Check the cross-section and number of cores to select the correct tool and notch on a wire stripper
