

How to use IP to trace MAC address on a core switch

Overview

Run the command `ping ipaddress` to contact the IP address. Find the MAC address under "Physical Address" or "HWaddr". This methodology is vendor agnostic, but in this example we will be focusing on Cisco devices. This can be used whenever you are. Finding which switch and port an end user IP is connected to in a large LAN with multiple switches involves a series of steps using network tools and commands. The procedure involves two key steps: First, use the `mac address-table` to map the. From the above you know the MAC Address of for the device: Now, do a `show mac-address` command on the core switch or router. We'll show you how to use commands like `arp` and `getmac` to find the MAC address for a. Connect to the Switch/Router by using a console cable or a terminal emulator like Putty or Secure CRT. Next enter "enable" mode on the switch by typing `enable`.
