

How to wire the 4-pin laser diode

Overview

Connect the laser diode module to Arduino pins the right way. Signal goes to a digital output pin. Write easy Arduino code to turn the laser on and off. My questions are very basic, but since it's the first time I will operate a diode like this, could someone tell me what voltage i have to apply to which pins?

EDIT: I don't have a datasheet, or even an online reference. Other modules include only two pins: VCC (power supply) and GND. A laser diode is a cool component that you can do a lot of fun stuff with, from engraving wood to creating a light show or giving your robot eyes! They range from super cheap (or even free if you can find one in an old CD player!) to more expensive. You. The purpose of this laser diode tutorial is to provide the information necessary to create a long lifetime, stable laser diode system. This component is widely used in various applications, including but not limited to optical communications, barcode scanners, laser.
