

Huawei dual-optical-eight-electrical-switch

Overview

Huawei has innovatively introduced the all-optical cross-connect (OXC) technology to data center networks (DCNs) and launched the industry-leading DC optical switch — Huawei OptiXtrans DC808 — to build a next-generation optical-electrical hybrid computing DCN for the AI era. In DCI scenarios, as general-purpose AI models evolve at a tremendous pace. Comprehensive analysis of Huawei's revolutionary optical switch innovations for 2025, including data center all-optical switching, silicon photonics integration, quantum-compatible switches, and 5G-Advanced network solutions. The year 2025 marks a pivotal year for Huawei's optical switching. d for Data Center Interconnect (DCI). It features the highest performance (88T/fiber), simplest design (deployment within 8 minutes from scratch), and highest reliability (twice the industry average). Huawei OptiXtrans DC908 is. A switch must use optical or copper modules that have been certified for use on Huawei switches.
