

Indoor Distribution Box Quality Standards

Overview

The IEC (International Electrotechnical Commission) and BS 7671 (British Standard for Electrical Installations) both provide essential requirements for electrical installations, including those for fuse boards like garage unit, consumer unit and distribution board. A unit that lacks corrosion protection fails within months in humid or chemically aggressive. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. The Distribution box certification requires standardized testing processes and comprehensive documentation to verify safety and performance. When they fail, everything goes dark. Ensure safe placement: install in.
