

Installation Solution for Swedish NEMA4X Fiber Optic Tubing

Article Overview

Use low-friction microducts with proper protective measures, following Swedish standards and NEMA4X requirements, for safe and efficient fiber optic installation.

Recommended Installation Practices

Protective Handling: Keep the cable's protective material in place until installation to prevent mechanical damage. Avoid sharp bends, turn-backs, and pulling over edges. Ensure the installation area is free of sharp objects and rocks that could damage the cable sheath. For outdoor installations exceeding 24 hours, additional protective covering is recommended. LSZH sheathed cables are sensitive to mechanical stress, especially at higher temperatures, so handle with care during installation . **Bending and Looping:** Use “figure-8” loops when laying fiber on surfaces to prevent twisting. Loop sizes of 2–4 meters are typical, depending on cable stiffness. For vertical installations, clamp the cable at frequent intervals to support its weight and prevent exceeding the maximum long-term load .

Microduct and Tubing Solutions

Swedish Market Options: Ahlsell provides a wide range of microducts suitable for NEMA4X-rated fiber optic tubing. Options include:

- Microducts for direct ground installation: Low-friction HDPE tubes (e.g., 14/10 mm) for blown fiber or micro-cables with outer diameters
