

Introduction to Base Station Power Distribution Box

Overview

Power Supply System This acts as the “blood supply” of the base station, ensuring uninterrupted power. It includes: **AC distribution box:** Distributes mains power and offers surge protection. **Basic requirements of communication network equipment for power system:** 1. **High stability:** Voltage fluctuations, noise and transient voltage must meet the standards to ensure the normal operation. They are referred to as cell towers or cellular antennas. The idea of base stations is anchored in their function to provide coverage, capacity, and. A prefabricated substation, commonly known as a box-type substation or compact substation, is an integrated power distribution unit designed for voltage transformation and energy distribution in electrical systems. **Remote Radio Unit (RRU):** Converts signals to radio frequencies for transmission. This BTS connects to both the Mobile Switching Center (MSC), which directs hand-off between towers for mobile users, and the Radio Frequency (RF) transmitters/receivers antenna located on the tower structure.
