

# Is the distribution box protected against water

## Article Overview

Waterproof distribution boxes are specifically designed to protect electrical components from water, moisture, and harsh environmental conditions.

### Design and Materials

Waterproof distribution boxes are constructed with high-impact plastics like ABS or polycarbonate, or corrosion-resistant metals such as stainless steel or aluminum, which provide durability and resistance to water ingress . They often include silicone or polyurethane gaskets that seal the enclosure, preventing water from entering even under pressurized conditions . Some designs feature self-draining slopes, transparent covers for inspection, and breathable valves to equalize pressure while blocking liquid water .

### Protection Ratings

The water resistance of a distribution box is defined by IP (Ingress Protection) codes or NEMA ratings. For example:

- IP65: Dust-tight and protected against low-pressure water jets from any direction.
- IP68: Fully dust-tight and protected against continuous immersion in water.
- NEMA 3R: Protects against rain, sleet, and snow but not pressurized water.
- NEMA 4X: Provides protection against windblown dust, rain, splashing water, and hose-directed water, with added corrosion resistance ....
