

Latest Price List for Tight-Cloth Optical Cable Supply

Article Overview

As of early 2026, high-performance bend-insensitive optical fibers like G.657A2 are trading at approximately \$35 per kilometre, while standard G.652D fibers range from \$22 per kilometre, reflecting a sharp increase due to global supply constraints.

Current Pricing Trends

Tight-cloth optical cables, particularly G.657A2 and G.652D fibers, have experienced significant price increases since mid-2025. G.657A2, used in data centers and tight-radius applications, has roughly doubled in price to \$35/km, while G.657A1 and standard G.652D fibers are now around \$22/km, up from \$12-14/km a year ago (DTECH®). Chinese G.652D bare fiber prices surged over 80% between November 2025 and January 2026, surpassing European levels for the first time in seven years (CRU).

Factors Driving Price Increases

- **Supply Constraints:** Limited availability of high-purity silica preforms and specialized coatings has tightened production capacity, especially in China, the world's largest fiber producer (Yibocable).
- **Rising Input Costs:** Energy, labor, helium for cooling, and silicon tetrachloride costs have increased, adding to production expenses (USITC).
- **High-End Demand:** Expansion of AI data centers, FTTH projects, and specialized defense-grade fibers for drones has diverted production toward high-margin, high-performance fibers, reducing availability for standard tight-cloth cables (Yibocable)...
