

Mauritius Distribution Box and Primary Distribution Box Installation

Article Overview

Distribution boxes (DBs) and primary distribution boxes (PDBs) in Mauritius are essential for safely managing electrical circuits, and their installation must comply with local standards and be performed by qualified electricians.

Overview of Distribution Boxes

A distribution box (DB), also called a distribution board, is designed to safely gather and distribute electrical power to subsidiary circuits within a building or facility. DBs are used in residential, commercial, and industrial settings and must be weatherproof and durable if installed outdoors or in specialized environments like swimming pools. They typically include modular switchgear, circuit breakers, and earth terminal blocks to ensure safety and proper circuit management. Common types of DBs available in Mauritius include:

- Practibox S: Surface-mounted cabinets ranging from 4 to 72 modules, suitable for residential and small commercial installations.
- Easy9 Enclosures: Plastic modular enclosures with 18 modules per row, designed for indoor use with IP40 protection when closed.
- Custom DBs: For specialized applications such as pool lighting or heat pumps, ensuring ruggedness and compliance with safety standards.
