

Method for cutting cable tray reducing elbows

Article Overview

A reducing elbow in a cable tray can be made by carefully cutting, notching, and bending the tray using appropriate tools like bolt cutters, band saws, or angle grinders while following safety precautions.

Tools and Materials Needed

- Straight section of cable tray (wire mesh or metal)
- Measuring tape, marker, and set square or protractor
- Bolt cutter (for wire mesh) or band saw/circular saw (for metal trays)
- Drill with bits, nuts, bolts, and washers for assembly
- Cold galvanizing spray or protective coating for cut edges
- Personal protective equipment: Kevlar gloves, safety glasses, helmet, and footwear

Step-by-Step Process

1. Measure and Mark Determine the desired position and angle of the reducing elbow. For a 90° elbow, mark the center line and measure out 45° cuts on each side of the tray base. For a reducer, mark the width transition points along the tray edges to match the smaller section . 2. Cut the Tray

- Wire mesh trays: Use an angular bolt cutter to cut the cross wires and side flanges. Position the cutter perpendicular to the wire for a clean cut and minimal burrs .
- Metal trays: Use a band saw or circular saw for precise cuts. Angle grinders can b...
