

New Energy Solution for Fiji Communication Sites

Overview

Details were released on 75 sites to serve isolated communities in Fiji that lack access to reliable and affordable electricity, with plans to construct hybrid solar PV mini-grids through an estimated \$60M USD in capital investment. Solar and wind are ideal technologies to power the telecom industry expanding in Small Island Developing States (SIDS), like Fiji. Most communications companies have similar objectives when it comes to the evaluation of new infrastructure improvement projects and how to increase operational. According to the Fiji Renewable Energy Integration Investment Plan by the Climate Investment Fund, the asset management plan for upgrading Fiji's electric grid should focus on accommodating renewable energy resources and EV stations. The deadline to express interest is April 17. Download PDF copy showing Fiji's major energy projects timeline and costIn the tropical paradise of Fiji, Ericsson, its Australian partner Maser, and a top Fijian communication service provider (CSP) have teamed up to install 700 mid-band passive antennas across more than 250 base stations.
